

Select <File>, <Import>, <Import Site Wizard>

Import the files from your hard drive. Select the radio button for “File System”. Enter the hard drive path, or “Browse” to the folder location for your original “Allwebco” template. Select the entire folder.

The “Wizard” will request a location to save a copy of the “Expression Web” template. Enter hard drive path, or “Browse” to the new folder location. Note: the “New Publish Location” (folder name) cannot be the same as the original template name, e.g. tempT20Serenity (original folder), New Publish location – Serenity (new folder).

Finish the “Wizard” to add files to your web site.
